helping save lives

Obstetric Solution

SimMom[®] and MamaBirthie

Combining high and low fidelity simulation to help improve patient outcomes

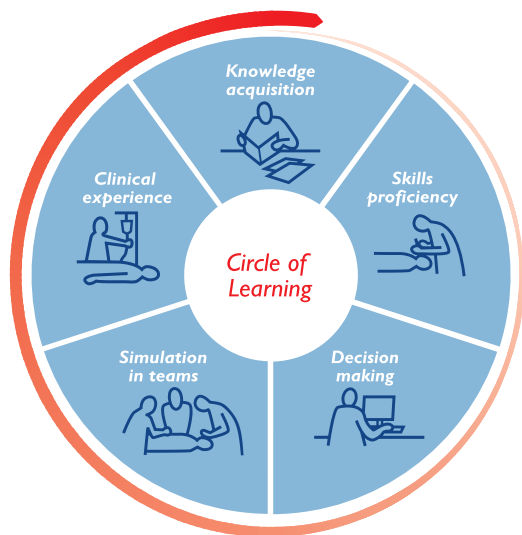

SimMom[®] is an advanced full body birthing simulator with accurate anatomy and functionality to facilitate multi-professional obstetric training of birth management, with both manual and automatic delivery modes. MamaBirthie is a simple, easy to use obstetric training device which can be paired with a standardized patient or used as a tabletop skills trainer.

Together, SimMom and MamaBirthie offer a solution for delivering efficient and effective obstetric simulations which meet learning objectives around care, communication, and skills.

Improve the quality of obstetric care

SimMom and MamaBirthe combined provides an impactful simulation toolkit, which can be used at different stages of the Circle of Learning to support a complete learning experience.

One of the most important objectives during labor and delivery is recognizing the potential risks to both the mother and baby. By building a well-trained team, confident in their abilities to manage adverse events while communicating with respect to the mother, you ensure better outcomes for both patients.

Developed in partnership with Limbs & Things

Laerdal has given SimMom an easy-to-use, full-body simulation system, while Limbs & Things brings a level of realism, both in terms of anatomy and obstetric experience to the product.

Skills training at hand when learning procedures by heart

MamaBirthe's easy set-up is ideal for repeated practice. Allow your students to get hands-on experience with standard procedures from day one.

- Practice vaginal and abdominal examinations
- Use the cervical inserts for dilatation and effacement assessment, as well as identifying positioning
- Palpate the baby's position using anatomical landmarks
- Effectively teach complex births such as vacuum-assisted delivery, breech and shoulder dystocia
- Gain tactile feedback from BabyBirthe's palpable fontanelles

Make errors now, to avoid them in the future

No one likes to make mistakes, yet it's an important part of training. With this obstetric solution, teams can train for decision-making in emergency settings and the ability to work under pressure in a safe environment.

With immediate feedback from either simulator or role-play, instructors can pinpoint areas of improvement, teach precise behaviors for real-life emergency procedures, and instill confidence over time.

When it comes to labor, it's all about delivering respectful care

Hybrid simulation can improve patient outcomes and patient satisfaction, as it combines skills assessment in both clinical treatment and communication with a standardized patient.

MamaBirthing is ideal for practicing interaction and active listening in role-play settings. By using it for peer-to-peer training sessions, students build engagement for respectful care, effective communication, and risk managing.

Keeping normal birth, normal

This obstetric solution enables training on both standard deliveries and life-threatening emergencies. By utilizing best-practice methodologies in simulation, students can prepare for low-frequency, high-risk emergencies.

Prepare learners to recognize and respond to events such as post-partum hemorrhage, uterine inversion, and maternal collapse.

That was great – now, let's do it again!

Practice precise procedures with SimMom, and hands-on repeated maneuvers with MamaBirthing to enhance learners' psychomotor skills and promote the best possible patient care.

Enable Rapid Cycle Deliberate Practice to boost individual performance - repetition and debriefing are the keys to continuous improvement.

Mother and Baby

The ideal solution when caring for two

SimMom®

- An advanced, full-body simulator available in both manual and automatic delivery modes
- Covers all stages of labor - from antepartum to postpartum
- Provides opportunities for enhanced in-situ training with cross-functional teams to work collaboratively
- Train for the low-frequency, high-risk incidents
- Prepare learners to recognize and respond to potential high-risk births and postpartum complications such as PPH
- Controlled wirelessly with LLEAP, Laerdal's simulation software
- Add the flat abdominal skin module to extend the scope of your training to a full range of women's health scenarios
- Help improve point-of-care diagnostics training and visually determine the health of the fetus and mother with an optional Ultrasound Solution

MamaBirthe

- Simple simulator that can be worn on a standardized patient or mounted on a table
- Ideal for practicing maneuvers and skills training independently or peer-to-peer
- Train skills including abdominal and vaginal examinations, normal birth, vacuum-assisted delivery, shoulder dystocia and breech
- Practice on communication and collaboration with the mother through role play
- Use MamaBirthe as a skills trainer to best prepare learners for high fidelity simulations on SimMom

Operation

SimMom can be operated by a LLEAP instructor computer and can utilize a simulated patient monitor. Incorporate SimCapture for a complete debriefing solution.

Services

Optimize your investment

Our team of educators and service technicians have years of industry related experience that can help you successfully implement and sustain your simulation program. We're here to help you get the most out of your simulation training with support when and where you need it. From comprehensive long-term packages to a full range of individual solutions you may choose from:

- ValuePlus Technical Services Packages
- Educational Pathway Education Services Packages
- On-site technical services
- eLearning courses
- Virtual courses
- On-site educational courses
- Blended learning workshops
- Help Desk phone and email support
- Self-guided how-to video library
