Maternity & Pediatric
Ensure student confidence and competence

An interactive, personalized simulation experience
Develop clinical reasoning skills, competence, and confidence in nursing students through vSim for Nursing, co-developed by Laerdal Medical and Wolters Kluwer. Designed to simulate real nursing scenarios, vSim allows students to interact with patients in a safe, realistic environment, available anytime, anywhere.

Curriculum integration
Online, interactive virtual simulations with integrated curriculum resources provide a full simulation learning experience for every student. Students have access to suggested reading material from trusted Wolters Kluwer sources, pre-simulation and post-simulation quizzes, documentation assignments that can be used in Lippincott DocuCare, and guided reflection questions to gauge student understanding of a scenario and support improved competence through remediation.

Patient-centered care
Nursing students develop clinical reasoning skills by prioritizing and implementing actions within several dimensions, including:

- **Safety Measures** – Practice safe procedures
- **Communication** – Interact with the patient through questions that result in text and audio responses
- **Assessments** – Conduct specific physical assessments
- **Interventions** – Take action with the patient to improve their health status
- **Drugs & IV Management** – Administer medications according to provider orders
- **Tests & Diagnostics** – Perform lab or diagnostic tests to support clinical decisions

Measure student success
Create classes and monitor student results by viewing pre-simulation and post-simulation quiz data and student feedback logs.

A fully integrated course solution
Adopt vSim for Nursing within Lippincott CoursePoint+ for an enhanced virtual simulation experience for your course that provides integrated digital textbook content, adaptive quizzing, and remediation at the point of learning. Find out more at thepoint.lww.com/coursepoint
Unique, personalized learning

vSim for Nursing allows each student to have a different experience with the patient. By recording student interactions throughout the patient care scenario, a personalized feedback log is generated, customized to the user experience. Each time students repeat the scenario, they will receive a personal feedback log outlining their clinical reasoning decisions.

Real-world, evidence-based scenarios

vSim for Nursing will be available for the core nursing curriculum. vSim for Nursing | Maternity and Pediatric includes 5 patients from the NLN Simulation in Education – Obstetric scenarios and 5 patients from the NLN Simulation in Education – Pediatric scenarios that currently exist as Laerdal simulator scenarios.

Maternity:
- Amelia Sung – Shoulder Dystocia
- Brenda Patton – Group B Strep Positive
- Carla Hernandez – Preparation for C-section due to Umbilical Cord Prolapse
- Fatime Sanogo – Moderate Postpartum Hemorrhage
- Olivia Jones – Severe Preeclampsia

Pediatric:
- Brittany Long – Sickle Cell Anemia – Acute Pain Crisis
- Charlie Snow – Anaphylaxis
- Eva Madison – Dehydration
- Jackson Weber – Generalized Tonic-Clonic Seizures
- Sabina Vasquez – Pneumonia Leading to Respiratory Distress in a Child with Known Asthma
