PROMPT Flex Caesarean Section Module

Product No: 80103
PROMPT Flex Caesarean Section Module

Product No: 80103

This product is ideal for practising the skills required when performing a transverse incision, (both Pfannenstiel and Joel-Cohen), allowing for the layers to be sutured as well as in-situ repair of the uterine wall. Also delivering a difficult baby with an impacted head or a transverse lie can be performed.

Skills

- Abdominal and uterine wall opening and closure
- Cephalic and breech delivery
- C-section at full dilatation:
  - Head disimpaction using vaginal push methods
  - Use of balloon disimpacting device
  - Reverse breech extraction
- Transverse lie
- Instrument assisted delivery
- Delivery of the placenta
- Teamwork and human factors training in emergency Caesarean section

Features

- Uterus holds baby firmly in position for normal and transverse lies, breech and cephalic presentations
- Uterus support positions baby and directs it towards the pelvis/abdominal incision when fundal pressure is applied
- Pre-incised skin option allows easy repeat delivery practice
- Surgical pad allows realistic dissection and closure and is reversible to allow 2 uses
- Single/double in situ uterine wall closure
- Suturing of rectus sheath, fat and subcuticular or cutaneous skin closure
- Accommodates retraction using metal, plastic or rubber retractors

Package supplied

- 80104 Caesarean Section Surgical Pad (x2)
- 80138 Perineum for PROMPT Flex CDE and C-Section Modules
- 80170 Uterus for PROMPT Flex Caesarean Section Module
- 80171 Pre-incised Delivery Only Skin for PROMPT Flex Caesarean Section Module
- 80172 Surgical Skin for PROMPT Flex Caesarean Section Module
- 80173 Cervix for PROMPT Flex Caesarean Section Module
- 80175 Foam Uterus Support for PROMPT Flex Caesarean Section Module
- 80176 Full Dilatation Pelvic Insert for PROMPT Flex Caesarean Section Module
**Components**

- **Caesarean Section Surgical Pad** (x2)
  Part No: 80104

- **Pre-incised Delivery Only Skin**
  Part No: 80171

- **Foam Uterus Support**
  Part No: 80175

- **Perineum for PROMPT Flex CDE and C-Section Modules**
  Part No: 80138

- **Surgical Skin**
  Part No: 80172

- **Uterus for PROMPT Flex Caesarean Section Module**
  Part No: 80170

- **Cervix for PROMPT Flex Caesarean Section Module**
  Part No: 80173

- **Full Dilatation Pelvic Insert**
  Part No: 80176
Attaching the C-Section Perineum

This module is to be used in conjunction with your PROMPT Flex Birthing Simulator

1. Remove PROMPT Flex Abdominal Skin from the PROMPT Flex Unit

2. Remove the Pelvic Ring Clamp from the PROMPT Flex Unit
Remove the Cervix if present

Once the top half of the perineum has been detached from the unit, detach the skin from the poppers on the bottom of the mother unit

Remove the birth canal and perineum by firstly detaching the perineal skin from the poppers on the mother unit, then carefully feed the birth canal through the pelvis

For C section at full dilation/head impaction, fit the Full Dilation Pelvic Insert in the pelvis prior to fitting the birth canal and perineum
The Full Dilation Insert allows presentation of the head just below the ischial spines, for Caesarean section at full dilation.

Attach the Perineum for PROMPT Flex CDE and C-Section modules. Push the birth canal up through the pelvis.

Fix the perineum top and bottom using the poppers.
The perineum is now in place

If NOT simulating full dilation/head disimpaction, fit the c section cervix at this point, lining up the locating features on the flanges of the cervix and the birth canal.

The cervix is now in place
Attaching the Uterus and Foam Support

To fix the uterus in place. Slide the Caesarean section uterus ring clamp into position on the clamping surface, over the birth canal (and cervix if used) flange.

Rotate the securing bar into position over the uterus clamp to fix the uterus in place.

Slide the Uterus Support under the uterus, ensuring the locking lug on the bottom fits into the handle recess on the PROMPT Flex mother unit.

The primary function of the Uterus Support is to position the baby, and direct it towards the pelvis and abdominal incision when fundal pressure is applied.
Loading the Baby into the Unit

1. The baby can be either loaded into position when the abdominal skin is in place, by inserting it between the skin and uterus (as shown in above photo) or it can be placed in the uterus before skin is attached. This is a matter of personal preference.

2. Lubricate the inside of the uterus.

3. Lubricate the cervix.

4. Lubricate the baby. If simulating breech, reverse breech extraction or transverse lie, avoid lubricating the baby’s legs.
If using the Pre-Incised Delivery Only Skin, attach the skin to the securing pegs on the sides and front of mother unit.

Push the baby into the uterus, through the gap between the uterus and the skin at the back of the model. Push the presenting part into the pelvis where it will come to rest against the cervix if present, or ischial spines if set up for full dilation C section.

The baby can also be placed in the transverse lie position.
Attaching the C-Section Surgical Pad to the Surgical Skin

For skills focussing on abdominal and uterine opening and closure the surgical abdomen and surgical pad are to be used.

1. Place the Surgical Skin face down on a table.
2. Ensure the C section Pad is the correct orientation, with the slits at the side of the pad, and the holes at the top and bottom of the pad.
3. Pull the black straps with poppers on either side of the Surgical Skin through the slits located on the sides of the Surgical Pad.
4. Fold the strap over and pop into place to secure.
Repeat this process with the straps at the top of the Surgical Pad, ensuring that the holes of the pad align with the poppers. Pop into place to secure.

The sides of the pad are now secure.

The Surgical Skin is now ready to be fitted to the PROMPT Flex mother unit.

Lubricate inner surface of the Caesarean Section Pad. Lightly talc the external surface of pad if sticky.
1. Detach the perineum skin from the poppers (only at the front of the mother unit)

2. Attach the 2 small holes on either side of the Surgical Pad to the securing pegs on the front of the mother unit

3. Align the two central holes of the Surgical Pad to the two central poppers

4. Re-attach the perineum to the poppers
Attach the surgical skin to the abdominal securing the pegs on the sides and front of mother unit and adjust the skin accordingly to ensure a neat fit.

The skin is now attached and ready for use.

Caesarean Section Surgical Pad has following anatomical layers:
With the baby loaded into the uterus, hold the uterus firmly around the baby with one hand.

With the clamp on the tensioning belt open, tighten the tensioning belt to the required degree of foetal head impaction.

Close the clamp on the tensioning belt.

Re attach the skin.
