The Laerdal-SonoSim Procedure Trainer allows learners the ability to perform ultrasound guidance with real-patient data on multiple body morphologies and 20 real ultrasound data sets. This trainer gives users the opportunity to develop the critical psychomotor skills that will serve as a foundation for future ultrasound-guided interventions in a safe, simulated, and highly realistic ultrasound environment using only a laptop, simulated transducer, needle and training torso.

Troubleshooting 32
Laerdal-SonoSim Procedure Trainer Overview

Setup

Turn on the Needle & Syringe

1. Press and hold

2. 10 seconds
Setup

Launch Laerdal Simulation Home

Note
Refer to Quick Setup Guide before proceeding to start up.

Double-click on Laerdal Simulation Home

Select Laerdal-SonoSim Procedure Trainer

Pair Needle & Syringe

Find the Needle & Syringe ID under the top of the plunger.

1

Select the matching Needle & Syringe ID.

2

S/N 5Q39QY

3

S/N 5Q39QY

Note
Depending on version purchased, Laerdal Simulation Home screen may vary.
Interface Overview

Toolbar placement

- Position for direct line of sight as shown below.
- Apply scanning gel to TrackPad.
- Calibrate, then start procedure.
- Maintain pressure with Probe to optimize tracking.
- Use Doppler and compression to identify vessels.
- Trigger cannulation by pressing Needle & Syringe button. Alternatively, apply traction or pressure on syringe plunger.

Case List
Available training cases sorted by region of interest.

Case
Navigate through hands-on training cases.

Case History
Brief patient history.

Probe Guide
Offers assistance orienting the probe to the optimal imaging plane.

Findings
Plays ultrasound scan findings with narration by an expert.

Calibrate
Instructions on how to calibrate the Probe and Needle & Syringe.

Help
Access User Guide.

Close
Quits the application.

Notes
Probe Guide: Click to switch the interface to the body model screen. Click again to return to fullscreen.

User Instructions
Interface Overview

Ultrasound Window Toolbar Definitions

- **Caliper**: Measure length, area, and volume.
- **Depth**: Click arrows to adjust depth of ultrasound view.
- **Gain**: Click arrows to adjust brightness of ultrasound view.
- **Doppler**: Displays power, color-flow, and pulsed-wave Doppler.
- **Freeze**: Click to freeze view. Click again to un-freeze view.
- **Save**: Saves the frozen view. Saved image can be annotated and archived for future use.
- **Review**: Review saved images.
- **Annotate**: Only available when the image is frozen.

Status Bar Definitions

- **Bluetooth Detected**: Lights up when the Probe and Needle & Syringe are detected on the TrackPad.
- **Unpair the Needle & Syringe**: Needle ID displayed
- **Needle & Syringe Battery Status**: Probe Needle & Syringe

Probe Guide Toolbar Overview

- **Change Position**: Changes the position of the virtual body.
Use

Optimal Positioning

Optimize user-system positioning so that the ultrasound screen and procedure site are in the same line of sight, minimizing the need for head movement and body rotation. Each pad location has a unique optimal positioning.

Follow the position guide for optimal use. Position yourself, the Torso and Computer as instructed in the optimal positioning illustration. Ensure that the TrackPad is in the same pad location as seen in the on-screen illustration.

Calibrate the Probe and Needle & Syringe

Ensure the Calibration Stand is secured to the Torso. Refer to Quick Setup Guide for instructions on placement of the Calibration Stand, Probe and Needle & Syringe. Follow the on-screen instructions to complete calibration. If calibration is successful the LED light on the Needle & Syringe will flash pink.

Note
- Ensure that the Probe and Needle & Syringe are correctly placed as shown.
- You can choose to recalibrate at any time during the procedure by selecting the Calibrate button in the toolbar and following the on-screen instructions.
- If the Torso moves at any time, you must recalibrate.
- Calibrate at the start of each case.
Select A Case
Select Case List to browse the available training cases, sorted by region of interest.

Apply Gel
Apply a small amount (size of a small coin) of ultrasound gel to the TrackPad. Gel is optional but recommended for optimal use.

Note
Applying too much ultrasound gel will negatively impact TrackPad performance

Start Scanning
Place the Probe on the TrackPad and begin by using 2D (greyscale) ultrasound to examine the structure of interest and surrounding structures.

Note
Remember to review Optimal Positioning for each training case.
Get Expert Probe Guidance
Select Probe Guide to get immediate assistance with optimally orienting the probe to acquire short- and long-axis views of the target structure.

Review Expert Findings
Select Findings button to review a narrated version of the ultrasound scan.

A translucent probe will display to use as reference
The Probe will turn green when close to the correct view
Narrate version of the ultrasound scan
Continue real time scan while reviewing Expert Findings
Doppler Modalities
Select Doppler to assess vasculature using power, color-flow, and pulsed-wave Doppler.

Doppler Playback Controls
The Doppler Playback Controls allows you to pause and play the Doppler recordings.

Color-Flow Doppler
Ultrasound scanning available when Doppler is enabled

Activate Doppler
Play/Pause

Pulsed-Wave Doppler

Power Doppler
Use

Utilize Compression
Assess the target structure with compression by pressing on the TrackPad with the Probe.

⚠️ Caution
*Do not put too much pressure on the TrackPad.*

Advance Needle & Syringe
Once the target structure has been identified, place the Needle & Syringe on the TrackPad and orient correctly. Then, advance the Needle & Syringe “into” the vein. When needle is in the correct position, pull back on the Needle & Syringe plunger to aspirate.
Review Feedback

After aspirating, real-time feedback will show if the cannulation was successful or unsuccessful.

Successful

Unsuccessful

Click Next Case to move onto the next case.
Charging Needle & Syringe

Charge Needle & Syringe every six months and/or when the battery level gets low as reported by the simulator.

Note
The Needle & Syringe will not connect to the application while charging.

During charging, the LED light displays the level of battery charge.

- **Orange**: Critical battery level.
- **Flashing Green**: Battery not fully charged.
- **Green**: Battery fully charged.

**Cautions**
- Do not continue to charge the Needle & Syringe after it is fully charged as this will reduce battery performance and life.
- The Needle & Syringe must be recharged at least once every six months to maintain optimal battery performance and life.
Store as shown between sessions.
Cleaning

Cleaning Torso

1. Clean with mild soap and water.
2. To ensure longevity, each manikin should be cleaned after each training session and a general inspection should be conducted regularly.

Note
- Do not submerge Torso or other parts in cleaning fluids or water.
- Avoid felt tipped markers, ink pens, acetone, iodine or other staining products and avoid placing the manikin on newsprint or inked lines of any kind.

Cleaning Track Pad

1. Remove the TrackPad from the Torso.
2. Wipe off any leftover ultrasound gel from the stand using a dry cloth.
3. Do not use any water or any alcohol based products.
4. Do not apply too much pressure on the TrackPad while cleaning.
5. The TrackPad should be cleaned after each use.

Cleaning Needle & Syringe

1. Wipe off any leftover ultrasound gel from the needle.
2. Do not use any water or any alcohol based products.
3. Do not pull on the needle while cleaning.
4. Do not push the needle in while cleaning.
5. The Needle & Syringe should be cleaned after each use.

Cleaning Probe and Probe Adapter

1. Remove the Probe Adapter from the Probe.
2. Wipe off any leftover ultrasound gel from the Probe and the Probe Adapter using a dry cloth.
3. Make sure to clean inside to Probe Adapter.
4. Do not use any water or any alcohol based products.
5. The Probe and Probe Adapter should be cleaned after each use.

Cleaning Calibration Stand

1. Remove the components from the Calibration Stand and remove the stand from the Torso.
2. Clean out any leftover ultrasound gel from the stand using a damp cloth.
3. Ensure that the Calibration Stand is totally dry before returning the components.
4. The stand should be cleaned after each use.
