MamaNatalie is a birthing simulator that makes it easy to create very compelling simulations of normal to more complex birthing scenarios. MamaNatalie is strapped onto the Operator, who performs the role of the mother at the same time as manually controlling the features.

MamaNatalie gives birth to NeoNatalie, a highly realistic newborn simulator that facilitates effective learning of essential newborn care, including basic resuscitation measures. NeoNatalie has realistic size and appearance, and also natural weight, feel and touch when filled with lukewarm water. The baby’s status can be simulated as desired for effective role playing in all relevant scenarios, from care after normal birth to treatment of emergency situations.

Items Included

MamaNatalie Birthing Simulator (inc. Uterus, Air Bag Reservoir)

Placenta w/ Umbilical Cord

Fetal Stethoscope

Fluid Collection Tray

Fluid Drain

Cervix Ribbon

Floor Protector

Backpack
Items Included

NeoNatalie
Newborn Simulator

Syringe (20 ml)

Urine Catheter

2 x Gloves
(1 normal and 1 long)

Blood Concentrate

NeoNatalie Skull
w/fontanelles

User Guide

User Guide
Overview

Abdominal Skin

Umbilical Cord

Placenta

Blood Tank Cap

Uterus Bag

Uterus Hook

Uterus Strap

Skeleton

Blood Tank

Squeaker Unit

Blood Valve

Waist Strap

Uterus Air Reservoirs

Rectum

Urethra

NeoNatalie
Labour Features

- Baby position in birth canal
- Cervix landmark
- Urine Bladder Catheterization
- Delivery of baby
- Delivery of placenta (complete and incomplete)

Bleeding After Birth Features

- Realistic Bleeding
- Bimanual Compression

Newborn Airway and Breathing Features

- Bag/Mask Ventilation
- Spontaneous Breathing
- Simulated Heartbeat
- Palpable Umbilical Pulse
- Crying
Preparing for Simulation - NeoNatalie

For instructions on how to fill NeoNatalie, refer to NeoNatalie User Guide.

Fitting the Hard Skull with Fontanelles

1. [Illustration showing fitting the hard skull with fontanelles]

2. [Illustration showing fitting the hard skull with fontanelles]

Note
Do not tighten the strap over the airways as this will block free air flow and prevent successful ventilations.

Detach the Simulation Tubes

The Simulation Tubes are attached to the right side of NeoNatalie's chest. Pull gently on the Tubes to release them.

Tip
After delivering NeoNatalie, reattach the Simulation Tubes to simulate spontaneous breathing, palpable umbilical pulse and heart beat.
Attach and Detach the Umbilical Cord
Preparing for Simulation - MamaNatalie

Fill Blood Tank

Mix the blood according to manufacturers instructions. Maximum 1.5 liters.
Preparing for Simulation - MamaNatalie

Fill the Catheter

Press the button on the end of the catheter whilst squeezing the syringe.

Place the Squeaker Unit
Protection Against Fluid Spillage

1.

2.
Preparing for Simulation - MamaNatalie

Attaching MamaNatalie to the Body

Hang the Uterus over the Hook
Preparing for Simulation - MamaNatalie

For Cervix Landmark

The Cervix Ribbon allows simulating a landmark for the cervix. This can be useful, for example when training on bimanual compressions.

**Tip**

Remove the Cervix Ribbon when cervix landmark is not needed during simulation training.
Mama-U is a uterus training model for postpartum care designed for training PPIUD and UBT, and is compatible for use with MamaNatalie.
Use - MamaNatalie

Insert NeoNatalie into uterus and attach the Placenta to the velcro located inside the uterus.

Tips for Performing Simulations

- Pay attention to the learners.
- Respond appropriately to the treatment given.
- Play and act as a birthing mother.

For demonstration videos and updated information visit: www.laerdalglobalhealth.com
Simulation of Fetal Heart Sounds

Use a finger to tap on the back part of the Skeleton to simulate the desired heart rhythm.
Delivering NeoNatalie

Tips

- For normal delivery, push directly on NeoNatalie’s chin. Deliver the rest of NeoNatalie by pushing onto the body.
- For easier delivery lubricate NeoNatalie’s head with a few drops of water or baby oil before putting NeoNatalie into the Uterus.
- During delivery, manipulate NeoNatalie as in a natural birth, for example by rotating the baby after the head is delivered. Hold NeoNatalie’s body inside the uterus, while rotating the body as desired.
Delivering the Placenta

After NeoNatalie is delivered, detach the Placenta from the velcro inside the uterus.

To ease delivery, place the Placenta vertically.

Placenta conditions

To deliver the placenta, detach the Placenta from the velcro inside the uterus.

Delivery of complete Placenta

Complete placenta.

Delivery of incomplete Placenta

Leave the small part attached inside the uterus.

Retained Placenta

Do not detach the Placenta. If the learner is pulling the cord, hold onto the Placenta to ensure it stays in place.
Controlling Blood Flow

To open the blood flow, push the Blood Valve inwards and slide it from the locked position to the middle position. If more blood is needed, push and slide the Blood Valve to the far right position.

If the operator lies flat, tilt MamaNatalie forward to keep the blood running.
Use - MamaNatalie

Controlling Uterus Conditions

Before simulation of any uterus condition:
Ensure that the uterus is unhooked.

Belly Button

To Simulate Contracted Uterus Condition

Move hand forwards and down below belly button

Gradually squeeze reservoir.

To Simulate Soft Uterus Condition

With an open hand, position the Uterus Air Reservoir above the belly button.

Note
When palpating a soft uterus, learners may start to palpate from the pubic bone and upwards. The Operator should follow this movement with the Uterus Air Reservoir until it is at the appropriate position.
Use - MamaNatalie

Urine Catheterization
Let the learner insert the prefilled urine catheter through the urethra until the catheter is empty.

Cervix Landmark
To create the cervix landmark, tighten the Cervix Ribbon to the desired level (see Cervix Landmark section).

Simulation of Baby Cries

Administration of Medications
• To simulate intramuscular administration of medications, use the 20 ml Syringe (do not use a needle).
• To simulate administration of suppositories, medications can be inserted into the rectum.
Cleaning

Textile Parts

Light Cleaning
1. Use a soft cloth soaked in soapy water to clean all textile parts of MamaNatalie.
2. Rinse in clean water.
3. Hang to dry.

Note
Do not hang MamaNatalie to dry in direct sunlight.

Thorough Cleaning
1. Soak the Abdominal Skin in water for an hour (soaking the neoprene in water will dissolve salt and chemical build-up in the material).
2. Hang to dry, avoiding direct sunlight.

Hard Parts
Use a soft cloth soaked in soapy water to wipe off dirt.

Blood and Urine
- Empty the tank after each training session. Do not travel with artificial blood stored in the MamaNatalie blood tank.
- Flush the Blood Tank with clean water or, alternatively a 0.2% NaClO (sodium hypochlorite) solution.
- If improvised blood is used (hibiscus tea etc.), empty and flush the Blood Tank after every day of use.

Warnings
- Do not use strong washing detergents for cleaning, as it may damage the product.
- Do not leave MamaNatalie in direct sunlight.
- Do not leave a wet MamaNatalie inside a bag. Clean it and dry it after use.

NeoNatalie
- See NeoNatalie User Guide for further instructions on cleaning.
Disassembly & Reassembly

Disassemble MamaNatalie before cleaning or other maintenance. Empty Blood Tank before disassembly. To reassemble, follow the steps in the reverse order.

1. 

2. 

3. 

4. 

5. 

6. 

Notes

- When reassembling, ensure the urethra is positioned into the small opening of the Uterus before closing the Uterus Strap around the Skeleton. When correctly positioned, the urethra should be visible for the Learner from the outside.
- When reassembling, position the blood nipple into the opening of the Skeleton with the inlet tube pointing downwards. Twist 90 degrees to fixate.

Troubleshooting

<table>
<thead>
<tr>
<th>Issue</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>Artificial blood flows when it should not</td>
<td>• Check that the Blood Valve is in the closed position.</td>
</tr>
<tr>
<td></td>
<td>• Check all components for leakage.</td>
</tr>
<tr>
<td>If the Blood Tube seems to be blocked</td>
<td>a) Fill a syringe with water and try to flush the water through the tube from the blood outlet inside the uterus.</td>
</tr>
<tr>
<td></td>
<td>b) Inspect the tube from the Blood Tank. If the tube is deformed, massage the relevant point with your fingers until the tube has opened.</td>
</tr>
<tr>
<td>Hard to push NeoNatalie’s head out of the vaginal opening</td>
<td>• Check that the Uterus hangs on the hook of the Blood Tank Cap.</td>
</tr>
<tr>
<td></td>
<td>• Check the position of the head.</td>
</tr>
<tr>
<td></td>
<td>• Check that the Abdominal Skin is fixed with the Uterus Strap to the pubic bone.</td>
</tr>
<tr>
<td></td>
<td>• Try lubricating NeoNatalie’s head with a few drops of baby oil.</td>
