Using SonoSim Starter Edition to Learn About COVID-19 Ultrasound Findings

Emergency medicine physicians serve as one of the most proficient users of point-of-care ultrasound among the medical community. During the current COVID-19 pandemic, the use of ultrasound is broadening by being used as a sensitive early indicator of lung involvement with affected patients. In addition, ultrasound is being used at the bedside to identify other COVID-19 effects relating to the cardiac and gastrointestinal systems. The resource-intensive nature of ultrasound training is more difficult in today's climate due to time pressures that arise when balancing providing clinical care and teaching.

With the SonoSim Starter Edition and COVID-19 educational content bundle, up to 50 learners can build ultrasound competency in identifying COVID-19 effects on the body by working through the below steps in a safe environment.

SonoSim Courses

Online didactic instruction

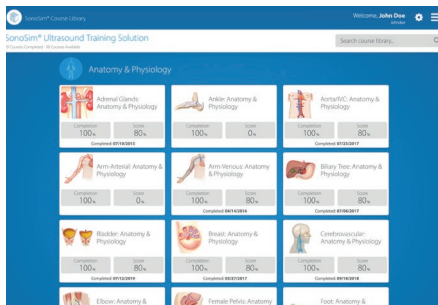

SonoSim Knowledge Assessment

Built-in Q&A to measure proficiency

SonoSimulator®

Hands-on scanning cases

Didactics

- Peer-reviewed SonoSim Courses are developed by leading experts in ultrasonography and medical education.
- The online courses are delivered in an interactive multimedia format using still and dynamic ultrasound imagery, audio narration, computer graphic imagery, and animation.

Knowledge Assessment

- Learners answer in-module knowledge assessment questions and complete a final Mastery Test upon course completion.
- Hands-on training cases can be saved, annotated, and archived for performance review.

Hands-on Training

- Access on-demand scanning of real-patient cases and pathologies with the patented SonoSimulator.
- Learners develop the key psychomotor skills that replicate the exact tactile experience of using an actual ultrasound probe to scan a real patient.

The SonoSim Starter Edition comes with 5 years of access to the SonoSim Performance Tracker, which allows the administrator to assign modules to learners and then track, monitor, and review performance and submitted content through one seamless interface.

Ordering Information

Part No. 390-00500

Description: SonoSim Starter Edition

Included:

- SonoSim Ultrasound Training Solution pre-installed on a SonoSim-certified laptop
- 1 SonoSim Probe
- 1 hard-shell protective carrying case
- Pre-installed Fundamentals of Ultrasound Core Clinical Module
- 5-year license includes access to SonoSim Performance Tracker for up to 50 learners
- Warranty information and quick set up guide

Part No. 390-00800

Description: COVID-19 Content Bundle

Included:

Anatomy & Physiology Modules:

- Lungs
- Heart
- GI Tract

Core Clinical Modules:

- Airway
- Cardiology
- Intestinal/Biliary
- Pulmonary
- Rapid Ultrasound in Shock (RUSH)

Speak to your Laerdal representative about building your SonoSim Starter Edition by adding any of the 60+ modules available or for further information about adding another preconfigured module bundle for Anesthesiology, Emergency Medicine, Critical Care or Needle Guided Procedures.
