HeartCode® 2025

An American Heart Association® and Laerdal Medical
Resuscitation Quality Improvement Program

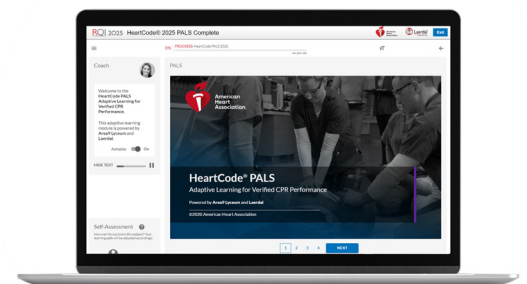

HeartCode

Safe and Efficient Resuscitation Training

Conducting effective resuscitation training for busy healthcare providers can be a challenge. Time, resources, cost and quality are all important factors. HeartCode from the American Heart Association and Laerdal delivers high-quality **BLS, ACLS, and PALS** training through a more flexible delivery method.

HeartCode gives providers and administrators more control of their time, schedules, and resources. By combining comprehensive online learning with hands-on skills practice and testing, HeartCode delivers consistent, high-quality CPR training across a healthcare organization at a pace that is right for every individual.

Deeply rooted in the latest science, HeartCode uses an advanced adaptive algorithm that tailors content in real time to the learner's specific expertise.

Efficient BLS, ACLS, and PALS Training

The self-paced eLearning portion of HeartCode features cognitive assessment activities, curricula for in-hospital and pre-hospital settings, as well as inclusive and responsive design for device compatibility. Upon completion, a hands-on skills activity is required with an AHA instructor or at a Simulation Station to receive an eCard.

Reaping the Benefits of Digital Learning

Personalized – True Adaptive® learning tailors education in real time to each learner's level of expertise to deliver the most efficient learning path. As a result, while all learners will achieve 100% proficiency, novice learners will have faster knowledge acquisition and mastery learners will only receive content they need.

Flexible – Learners complete the self-paced eLearning portion on their own schedule and at their own pace. HeartCode Online can be completed while following social distancing guidelines and is accessible on a variety of devices due to its responsive design.

Efficient – Consistent and adaptive training brings standardization and efficiencies to resuscitation training across all care setting. Learners start hands-on session with the same level of subject knowledge. Administration and labor expenses can be reduced while eliminating material fees.

HeartCode® Complete on RQI 1Stop™

HeartCode® Complete for BLS, ACLS, and PALS are available on the web-based RQI1 Stop™ platform and combine the flexibility of the AHA's self-directed eLearning programs with the benefits of real-time feedback from voice-assisted manikins.

Please contact your Laerdal Representative for ordering information.

HeartCode® Online

The HeartCode Online for BLS, ACLS, and PALS are available through Laerdal and can be accessed on the AHA's eLearning platform. After completing HeartCode Online, the learner completes the hands-on session with an AHA Instructor.
