

The Easiest Way to Learn & Teach Ultrasonography™

An Ecosystem of Ultrasound Training

Maximize Learning with SonoSim

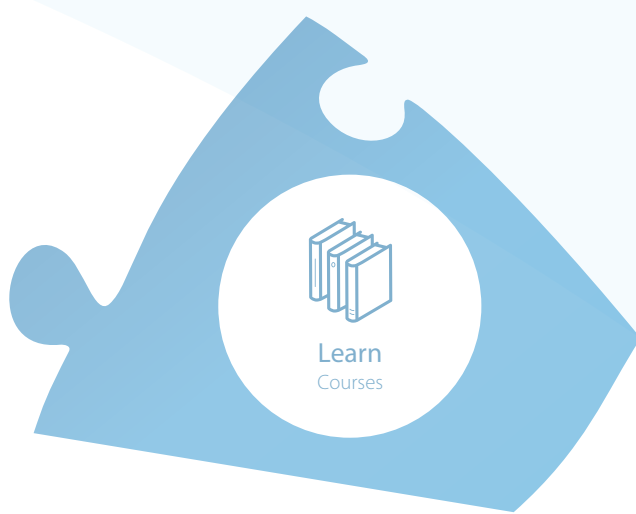

Point-of-care ultrasound (PoCUS) has evolved into a critical tool for improving patient care.

Bedside clinical scanning is the cornerstone of ultrasound education. However, providing learners with enough ultrasound knowledge, scanning skills, & access to patient pathologies remains elusive.

It is both essential & challenging to provide each & every learner an equal opportunity to 1) scan enough patients with 2) enough pathology, 3) alongside experts who can advise them with 4) enough repetition. These barriers to ultrasound training can seem, even to the most passionate ultrasound proponent, like an unsolvable puzzle.

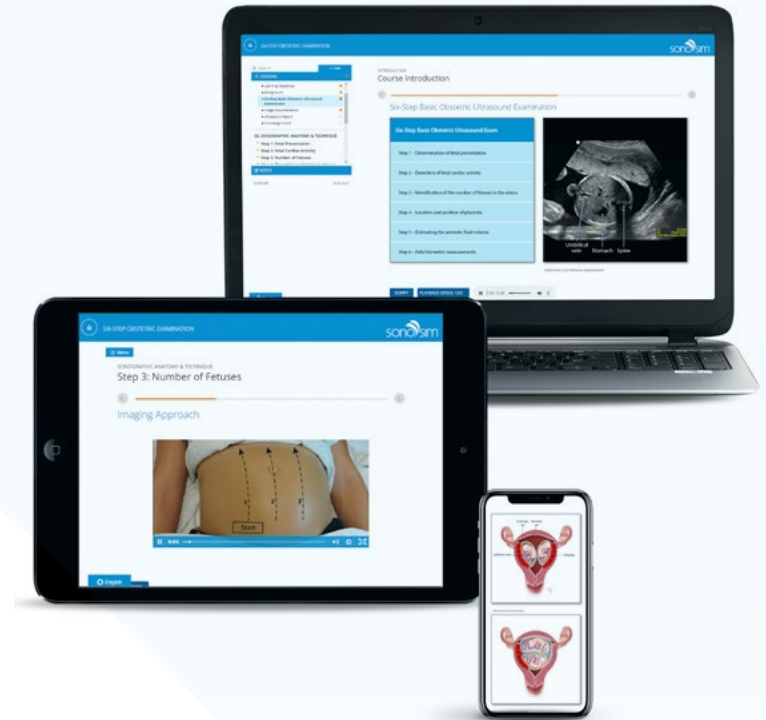

That's where SonoSim comes in. Our **Ecosystem of ultrasound learning & teaching tools, resources, & services simplifies the ultrasound competency puzzle** & makes bedside scanning practice even more effective.

SonoSim Cloud-Based Ultrasound Courses

Robust interactive ultrasound learning experience that goes beyond textbooks or online training videos.

- A growing library of 80+ interactive, multimedia, & peer-reviewed courses
- Created by leading ultrasound educators
- Anytime, anywhere access from any device
- Consistent, standardized, & measurable
- Knowledge checks & mastery tests

SonoSimulator® Ultrasound Scanning Cases

Provide unlimited access to real patient pathology & unlimited scanning practice on virtual yet real patient cases.

- Develop image acquisition & interpretation skills
- Provide unlimited, standardized access to scanning of real patient pathology
- Access the largest available library of real patient cases
- Support learning with a virtual tutor & on-screen probe guide
- Learn fundamental ultrasound applications & advanced techniques like Doppler

SonoSimulator® Ultrasound-Guided Procedures

Help learners develop psychomotor skills needed for a variety of ultrasound-guided procedures.

- Provide unlimited on-demand practice on real pathologic cases
- Vary body morphologies, physiologic states, & anatomy
- Develop procedural knowledge & psychomotor skills
- Access a virtual tutor & on-screen probe guidance
- Give real-time performance feedback powered by AI

Performance Tracker

Take control of the ultrasound classroom with performance tracking, learner feedback, automated image review, & more.

- Track & measure learners' progress
- Assess ultrasound image acquisition & interpretation skills manually & through automated image assessment, powered by AI
- Provide learners a portfolio of completed ultrasound training milestones
- Send learners feedback on their progress & skills

Tools

Provide learners flexible learning pathways.

- Engages learners with quick quiz functionality with SonoSim QuestionBank
- Scan real pathologic challenge cases in the SonoSimulator
- Provide Test Prep for Sonography Principles & Instrumentation (SPI) exams
- Refresh knowledge & provide quick reference on-the-go, with the SonoSim mobile app

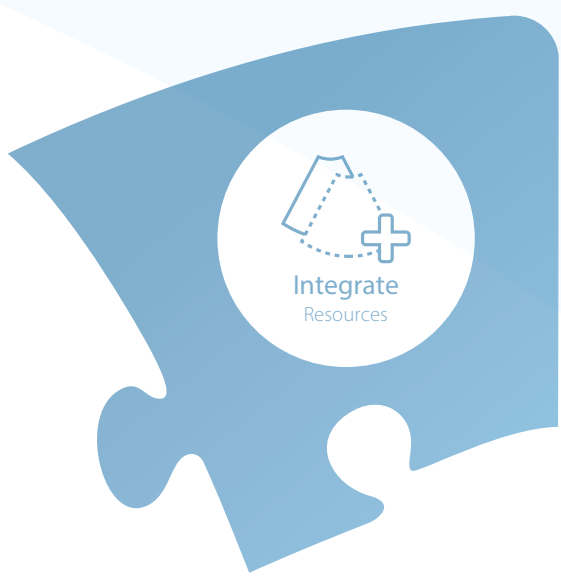

SonoSim LiveScan®

Efficiently & effectively teach learners to apply ultrasound findings in medical decision-making.

- Transform any live volunteer or manikin into a patient with real pathology
- Create realistic, immersive simulations using ultrasound with access to the largest library of real pathologic ultrasound cases
- Use pre-built or build your own unique simulation scenarios
- Vary vital signs & pathophysiologic states on-the-fly, remotely & from any device
- Build limitless ultrasound training & assessment scenarios

Resources

Seamlessly align learning objectives & integrate SonoSim into curricula with a large set of robust integration tools.

- Seamlessly integrate SonoSim content into any curriculum, cohort, or rotation
- Consult professional society guidelines & practice parameters by specialty & organization
- Assign pre-authored hands-on scanning assignments for SonoSimulator® cases
- Review course outlines & answer keys
- Search all SonoSimulator pathological case findings
- Work with your own Member Success Associate to maximize integration & implementation.

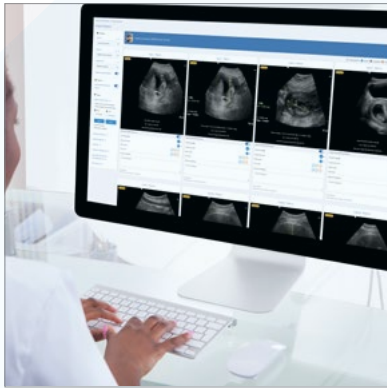

Study Tools

Case-based learning & reference tools advance training on-the-go

Apply
SonoSim LiveScan®

Apply U/S knowledge in medical decision-making

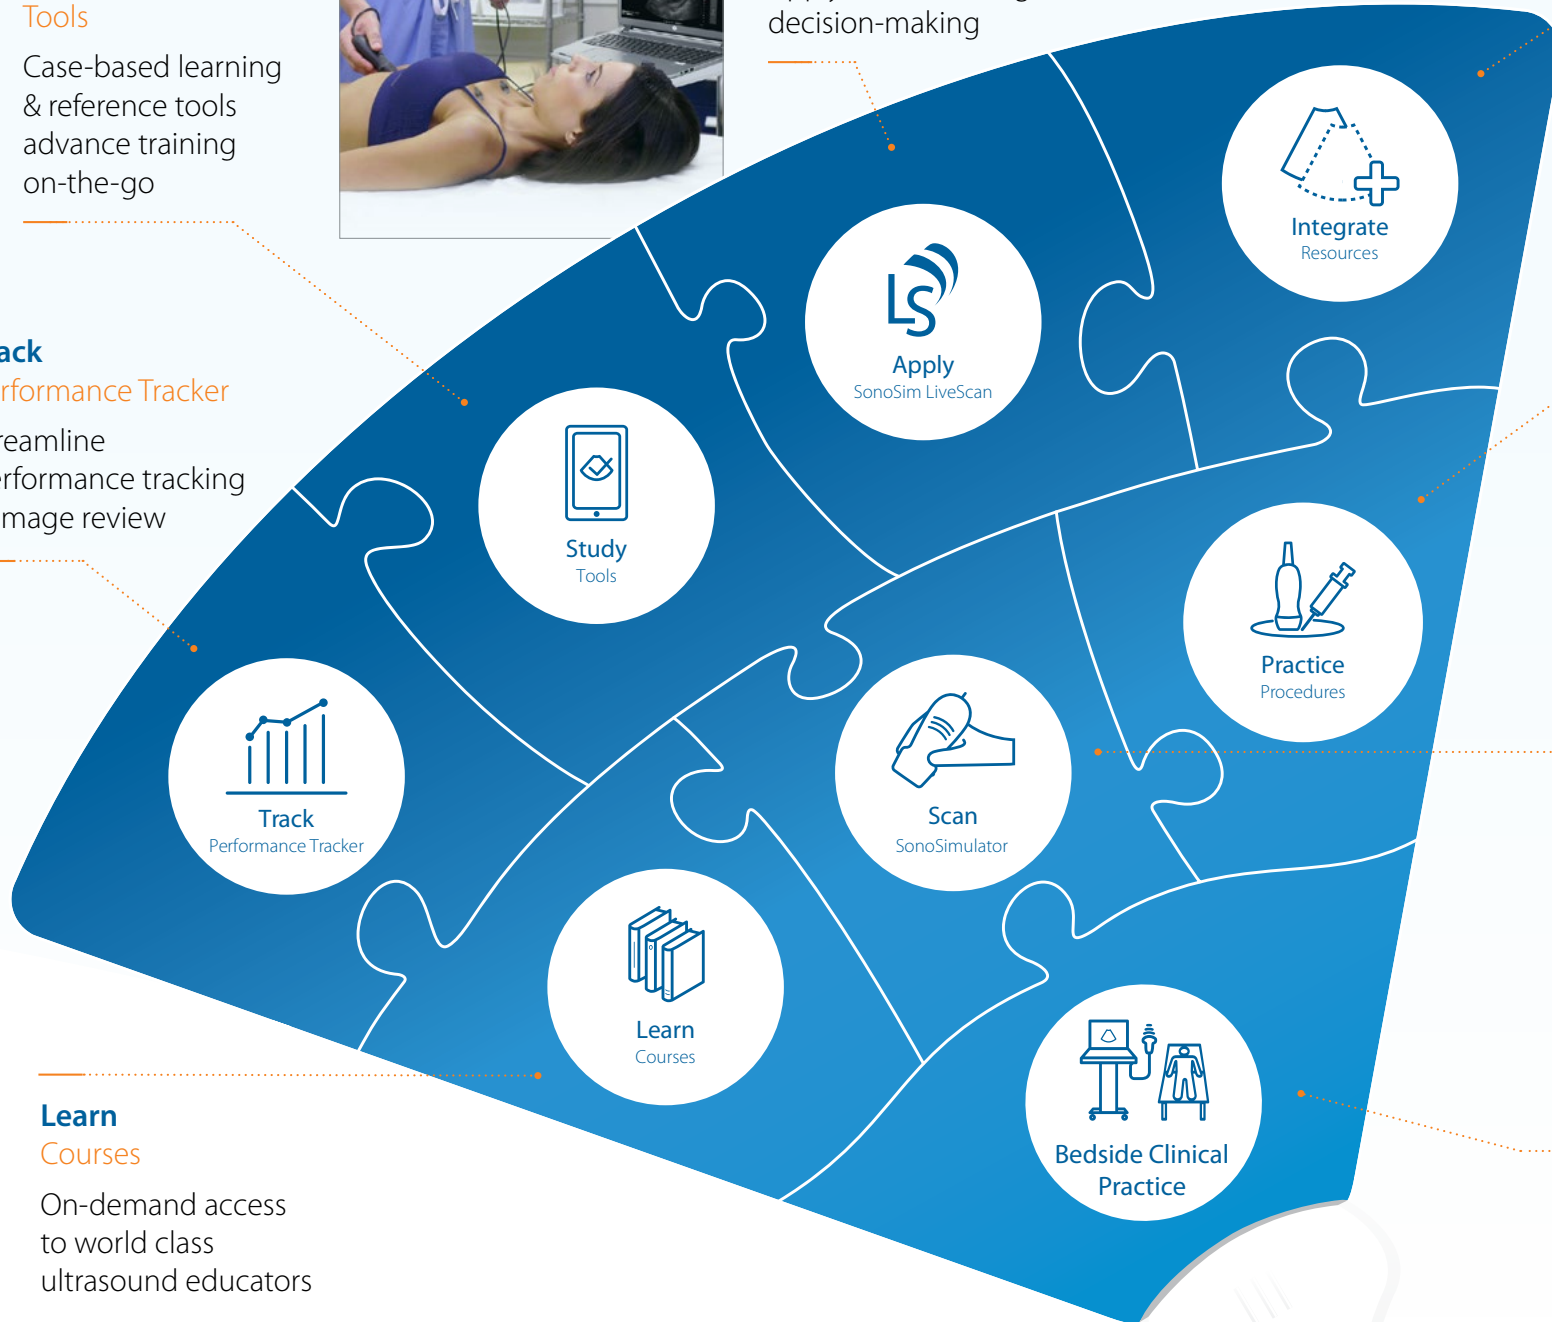

Track
Performance Tracker

Streamline performance tracking & image review

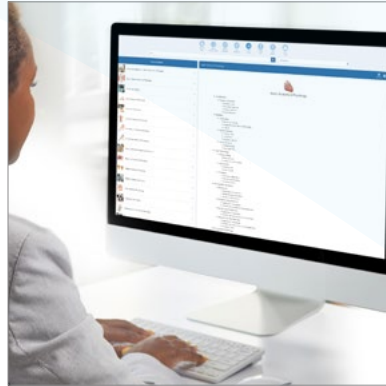

Learn
Courses

On-demand access to world class ultrasound educators

Integrate Resources

Integrate
ultrasound
into curricula

Practice Procedures

U/S-guided
procedure training
with real-time
feedback

Scan SonoSimulator®

Provide unlimited
scanning of real
patient pathology

- ✓ Simplify ultrasound training & maximize every learning opportunity.
- ✓ Prepare ultrasound learners for each valuable bedside patient interaction.
- ✓ Save ultrasound instructor time, simplify program administration, & accelerate learning.

Bedside Clinical Practice

SonoSim complements bedside learning & accelerates the path to ultrasound competency
