SimCapture Mobile Camera

Run your simulations anywhere, anytime

SimCapture Mobile Camera is a video streaming app which, when configured with a SimCapture account, acts as a live, portable camera for SimCapture Cloud sessions.

Capture your training on the move - transport cases, on site, and in situ simulations - with your mobile device, while benefiting from full access to SimCapture functionalities from anywhere.

Available on both Android and iOS.

Never miss a training opportunity - capture everything with ease

Extend the reach of your SimCapture platform by turning any mobile phone or tablet into a capture device and record sessions on-site, in-situ, and in your transport cases. SimCapture includes additional, complementary recording modalities to meet your program needs - contact us to get more information.

Truly mobile

Film simulations from anywhere internet access is provided: in situ, transport cases, and more. This ensures a holistic approach to simulation and debriefing – even for sessions held outside of the sim lab.

Up to four camera feeds

Capture every angle in one or multiple locations, with up to four mobile devices per simulation session - get the complete picture.

Live-stream to SimCapture cloud

The video can be annotated in the SimCapture interface during the simulation and is immediately available once the session is over - making the debriefing more efficient.

Fully compatible with LLEAP

Include your patient monitor and events in the simulation data for a complete simulation session that supports efficient debriefing and assessment. LLEAP treats the Mobile Camera as a normal camera. Sessions can be started from within LLEAP.

Synchronized mobile devices

Recording is started from the SimCapture interface – all mobile devices start/stop simultaneously, making it easy for you to begin the session, and ensuring quality of video. This also offers higher security against confidentiality breaches.

Ultra quick setup

Log into SimCapture, then enter four letters into your phone, and your camera is paired. Simple and easy to use!

Leverage SimCapture's full features with mobile freedom

- Secure, mobile-friendly, and cloud-based
- Use your mobile device to stream sessions
- Simulator data capture and visualization
- Learner and faculty tracking and portfolios
- Single Sign-On module
- Center sign-in - directing and tracking users
- Video annotation and session self-reflection
- Debrief from anywhere using just a browser
- Learner, faculty, and facility usage reports
- Customizable scenarios

- Resource tracking and reporting
- Inventory management
- Scheduling and reservation request process
- Checklist builder and custom assessments
- Courses and curriculum tracking
- Learner-driven features and checklists for peer-to-peer and self-directed training
- Robust suite of assessment and course performance reports
- Integration with Learning Management Systems
- Best-in-class training and support

Features above are dependent on the subscription tier.
